

Abstract of the Disclosure**Porous Duct Configured With A Thin Film**

5 An intake duct **1** is provided, particularly for taking air in an internal combustion engine, notably the engine of an automobile. Said duct includes a first wall **2** made of a porous material, wherein a film **4** is implemented which is sufficiently thin for avoiding any incidence upon the acoustical characteristics, having notably a surface mass of less than 100 grams per square meter. Said film **4** is fixed onto said porous wall **2** such that at least 50% of the surface of said film facing said
10 porous wall **2** is not fixed thereto.
